Response Attachment 200-252

The problem statement in this RID requests a change that is believed by the CLCS design team to be invalid for the following reasons:

1. The requirement referred to in the problem statement for this RID is intended to require a level of checking that a HCI that isn't authorized to issue a command is prevented from doing so.
2. There is no way to prevent an authorized user from issuing a command that he/she didn't intend to issue.
3. Various checks will be put into the system to minimize issuing a command that isn't intended. For example End Item Managers will only allow commands that are valid for the current state of the system being controlled, and Prerequisite Control Logic will ensure commands are valid for the state of the hardware.

The RID Management Team agrees with this assessment. The RID is therefore rejected. Thank you for reviewing the SLS and submitting your RID. Even though we rejected this RID, your input is valuable and we appreciate it.
